SUMMARY

AI Software Engineer with 11+ years of experience shipping production software, most recently as a Senior Software Engineer at Jitera leading and building platforms for Japanese enterprise clients. I build LLM applications and multi-agent systems in Python and TypeScript with the OpenAI Agents SDK, CrewAI, OpenAI and Claude APIs, and FastAPI, and use Claude Code in daily development. I also co-founded Dthree Digital, a web consultancy that has delivered 500+ projects for clients including Globe, BDO and Novartis, and lead its development team.

SKILLS

AI Engineering: Python, LLM applications, AI agents, multi-agent systems, OpenAI Agents SDK, CrewAI, OpenAI API, Anthropic Claude, tool calling, structured outputs (Pydantic), prompt engineering, tracing, Gradio, Claude Code, Codex

Back End: TypeScript, Node.js, NestJS, FastAPI, PHP, REST APIs, MySQL, MongoDB, Redis, Supabase

Front End: Next.js, React, JavaScript, Redux, Tailwind CSS

Mobile: React Native, iOS app development, Android app development, cross-platform mobile apps

Cloud and DevOps: AWS (S3, CloudFront), serverless, Vercel, Docker, CI/CD, Git, Heroku

CMS and E-commerce: WordPress, WooCommerce, Drupal, Shopify, Strapi

AI PROJECTS

Imat Deep Research | Open-source multi-agent research assistant | 2026

Python, OpenAI Agents SDK, Pydantic, Gradio | *github.com/imat-dev/imat_researcher*

- Designed a multi-agent pipeline (clarifier, planner, search, writer and email agents) that turns one question into a sourced long-form report and emails it to the user.
- Ran planned web searches concurrently through tool calling instead of one after another.
- Defined typed Pydantic contracts between agents, so every search plan and report is validated before the next stage runs.
- Streamed progress to a Gradio UI from an async-generator orchestrator and traced every run end to end for debugging.
- Stopped unresearchable requests at the clarifier stage, before any search or model spend.

Social Media REST API | Back-end service | 2026

Python, FastAPI, SQLAlchemy, Alembic, JWT | *github.com/imat-dev/fast-api-socmed*

- Built a REST API with JWT authentication, email confirmation, file uploads to Backblaze B2, database migrations, and structured JSON logging with per-request correlation IDs.

EXPERIENCE

Senior Software Engineer

Jitera | Remote | Oct 2023 – Present

- Yubisui (accounting platform for social-welfare and educational organizations): Team lead for a ¥80M redevelopment of a legacy accounting system. Led the engineering team, ran delivery with the PM and client, and designed the single and bulk journal-update flows across 36 happy-path scenarios, completed in March 2026.

- Wondertable (restaurant reservation and membership platform): Built across the React Native mobile app for iOS and Android, Next.js web and admin, and NestJS API on a team of 4 engineers and 3 QA. Owned the payment gateway serving 80,000+ users, overseas reservations and bookings, and scheduled notifications with retryable failure handling.
- Sekisui Heim (homebuilder): Full-stack engineer on a production construction-planning and vehicle-dispatch system that simulates the end-to-end construction and delivery process, including timing and cost. Built the React front end on AWS CloudFront and S3, about 50 NestJS backend APIs, and serverless functions, on a team of 4 engineers and 4 QA.
- Tokyu Stay (34 hotels, about 5,300 rooms in Japan): Built live reservation and loyalty integrations with the Tripla booking engine and SmartClub membership, using React hooks and webhooks, on a team of 10.
- Used Claude Code daily for AI-assisted development across client projects.

Co-Founder and Lead Full-Stack Developer (consultant since 2023)

Dthree Digital | Manila, Philippines | 2016 – Present

- Co-founded a Manila web consultancy and lead its development team; the firm has delivered 500+ projects in 10 years for clients including Globe, BDO, Novartis, ADB, IRRI, World Vision and AEON.
- Led technical delivery of goev.ph, the hub of a national EV campaign with BYD, ACMobility and the Department of Tourism: a 22-day, 3,500 km journey across 102 cities that set two Guinness World Records.
- Improved site speed by 30% for a school client and visitor retention by 25% for a corporate client.
- Led full-stack delivery of the Ateneo de Manila University and AmCham Philippines websites on Drupal, from requirements to launch.
- Shipped 10+ e-commerce platforms on WordPress, WooCommerce and Shopify, including Spinkie (retail) and InsBoss (subscription hiring of virtual assistants).
- Built back ends and REST APIs in Node.js, NestJS and TypeScript, and front ends in Next.js, React and Tailwind CSS.
- Mentored and code-reviewed developers at the agency; set up Git workflows and CI/CD deployments to AWS and Vercel.

Web Developer

Starfish Web Design Philippines | Manila, Philippines | 2013 – 2016

- Developed responsive websites for clients worldwide and integrated third-party APIs and services.
- Optimized front-end performance to reduce page load times.
- Led and mentored junior developers through code reviews.

EDUCATION

Bachelor of Science in Information Technology

Lyceum of the Philippines University, Batangas | 2009 – 2013

LANGUAGES

English (professional working proficiency), Filipino (native)
